

INTRODUCING

DoctorOnScreen

A NEW ERA IN MEDICAL WORLD

World is moving fast with Medicine and Technology . Humans achieved miraculous achievements in the field of Technology. Information Technology leads you to gather any information anywhere from the world on a single click. This was the motivation behind the development of DoctorOnScreen application, to allow patients to consult doctors from anywhere in the world with an internet connection.

We have a group of experienced medical practitioners across the world for consultation. You can look into the specialization and availability and choose the medical practitioner of your choice at anytime. A fee will be charged for consultation but at the same time, it saves the patient's money, waiting time to consult the doctor and provides an excellent world class service. Patients can easily manage the Health data in the smartphone which can be used anytime and anywhere, despite of their geographical boundaries. DoctorOnScreen can diagnose, treat, consult or even prescribe medication. Also it can be used for follow ups.

Health data/medical history is securely stored .However it can also be stored and shared at a family level. Health data of a patient will not be shared by the Doctor unless he gets consent from patients or the concerned person. Health data/medical history is very useful for the doctor to come into a conclusion more easily, thereby allowing the doctor to take the required immediate action.

This Mobile application works on Android & iOS platforms. For further clarifications, please feel free to contact us. We look forward to your ideas/suggestions so that we could improve our service to you.

KEY BENEFITS FOR PATIENTS

- Access to a group of Doctors without Geographical Limits
- Avoid Travelling
- Beneficial for Old age Groups
- Diagnosis can be quick and easy
- Easy access & viewing of medical history
- Easy way for communication
- Economical
- Flexible & Secure
- Health Data in Electronic form
